Vision-to-Goals Canvas

Startup: **HappyHealth** Team: **Theo**

Work top to bottom. Name your riskiest assumptions before you write any goals.

1. Vision in one line (5–10 years)

OUR VISION

Patients will receive qualified & reasonable health care assistant at their residence

2. Our stage today (tick one)

Problem-solution fit	Product-market fit	Early scale
☒ Do they have the problem?	☐ Will they pay and stay?	☐ Can we grow it profitably?

Evidence (users, revenue, pilots, team size): _____

3. Riskiest assumptions — if this belief is wrong, the startup dies

Finish the sentence "Our startup only works if…" — think about customers, payment, usage and reach.

#	Assumption	How sure are we? (1 = guess, 5 = proven)
1	My startup only works if clients / patients will pay on time	
2	Caregiver / our doctor might not reach on time	
3	Medical equipment damage	

▸ Scoring key — how sure are we?

1	2	3	4	5
Pure guess, no evidence	People said they would	Some use, but small or free	Real behaviour at small scale	Proven at scale with data

*Score the evidence, not your gut: did they say it, or do it? Your riskiest assumption = would kill you if wrong **and** has the lowest score.*

4. Candidate six-month goals — outcomes true by month 6, not activities

#	Candidate goal (what will be true by month 6?)	Tests assumption #
